📍 Gomel, Belarus

Summary

Senior Frontend Engineer with 6+ years of experience building high-scale web and mobile products, expert in TypeScript, React, Next.js, and React Native. Have a proven track record of leading teams, delivering complex features, and driving measurable impact while expanding into full-stack responsibilities.

Experience

Frontend Lead & Tech PM	getquin	Oct 2024 - Present
- Led a 5-engineer squad delivering financial data-import features with full ownership: defined roadmap, prioritized via RICE, drove PoC (Lovable/V0/Cursor), and implemented to production; measured impact using Amplitude and PostgreSQL. - Architected and delivered a Next.js/TypeScript "AI Import" wizard, owning UX, frontend, pricing, and analytics. Shipped beta in 3 weeks, production-ready in 6 weeks, ensuring scalable unit economics and wide funnel reach. - Extended n8n-based AI Chat with dividend and portfolio performance APIs (Node.js/Fastify), reducing latency by 20% and increasing messages per user per week by 30%. - Conducted 30+ customer interviews, translating pain points into high-value, product-informed features.		
Senior Frontend Engineer	getquin	May 2022 - Oct 2024
- Built front-end OAuth flows for multiple brokerage integrations with Next.js TypeScript and SCSS modules, onboarding 4k users/month and driving 7k+ paid conversions. - Delivered critical OAuth data integration for top brokerage, reducing sync failures 8% → 3% for 10k paid accounts; supported 5k+ paid conversions with zero downtime. - Developed core React component library with Storybook, adopted by 4 squads; halved design hand-off time and reduced UI regressions by 70% with screenshot testing. - Implemented BDD, E2E, and unit tests with Jest, Cypress, Detox, Gherkin/Cucumber for the core flows; zero P1-P3 frontend bugs for 12 months. - Adapted Apollo GraphQL codegen with Rust for strict types; integrated it in git pre-commit hooks and eliminated production type errors. - Mentored junior engineers, improving team consistency and delivery speed.		
Frontend Engineer (Product)	Jitsu	Jun 2021 - May 2022
- Implemented self-serve Stripe checkout using Next.js, Node.js and Supabase, enabling scalable subscriptions. - Rebuilt landing pages and documentation with mobile-first, accessible design, removing legacy layout bugs. - Added global state and caching with MobX, reducing redundant API calls and ensuring 60fps, lag-free UI. - Built monorepo setup with Lerna, improving CI/CD delivery speed by 20%. - Migrated documentation pages to MDX with static site generation (SSG) from markdown files, reducing pages latency by up to 20%.		
Frontend Engineer	Innowise	Jul 2020 - Jun 2021
- Developed front-end for US tourism and conference platforms supporting 10k+ real-time users. - Extended dashboards for enterprise clients, improving usability and reducing maintenance overhead. - Tech Stack: JavaScript, TypeScript, React, Redux/Redux Saga, CSS3/SASS/SCSS, Styled Components, HTML5		
Computational Physicist Associate	RadiaBeam Technologies / UCLA	Oct 2018 - Jun 2020
- Developed numerical simulations optimizing RF cavities, improving Q-factor by 30%. - Built Python/Pandas pipelines processing 100GB+ datasets for scientific analysis.		

Education

M.S. in Applied Physics - Particle Accelerators	National Research Nuclear University "MEPhI", Moscow, Russia	Sep 2017 - Jul 2019
B.S. in Applied Physics - Particle Accelerators	National Research Nuclear University "MEPhI", Moscow, Russia	Sep 2013 - Jul 2017
